

MAANG Stock Analysis 2000-2023

Siddakk Chatrath and Kenneth Aldridge
Northeastern University

Our dashboard consolidates trends of the big MAANG (Microsoft, Apple, Amazon, Netflix, Google) stock group over a period of 23 years, an extremely large dataset with different sub-trends and magnitudes. The scope of analysis and visualization can be as focused or broad as desired, with a select control to choose which stock(s) are to be displayed, a radio to select whether their open, close, adjusted price, or volume is shown, and a date range picker to limit or extend which part of the 23 year period is to be visualized and analyzed. Instead of looking at thousand-row long tables with quickly changing ups and downs (and that's for each stock!) this dashboard allows one to understand both general and focused trends through customizable visuals
